State of Louisiana Department of Transportation and Development (DOTD) Materials and Testing Section Qualification Procedure for Qualified Products List 52

ADHESIVE ANCHOR SYSTEMS FOR DEFORMED TIE BARS

MATERIAL SPECIFICATION REFERENCE:

DOTD Standard Specifications, Supplemental Specifications and Special Provisions, Subsections' 601.09, 1017 (copies attached).

PRELIMINARY REQUIREMENTS:

Qualified Product Evaluation Form

The manufacturer shall submit a standard "Qualified Product Evaluation Form" to the DOTD Materials and Testing Section Coordinator listed below, for each system to be evaluated, along with a letter requesting evaluation for the Qualified Products List.

Product Data Sheets

Include product data sheets for each system to provide all pertinent information relative to the product to be evaluated; including, but not limited to the manufacturer's specifications, anchoring instructions, available sizes (if applicable), product limitations (such as hole diameter tolerances, moisture limitations, etc.) and Materials Safety Data Sheet (MSDS).

Samples (to be furnished at no cost to the Department)

Submit a 1-Liter (a quart) sample of each component of adhesive or a 4-Liter (a gallon) sample of grout for compressive strength testing. In addition, three No. 13 x 712 mm (three # 4 x 28") deformed tie bars, conforming to ASTM A-615, threaded a minimum of 152 mm (6") on one end with two nuts and washers attached shall be submitted for pull-out tests along with a sufficient quantity of material needed to perform tests.

Materials and Testing Section Qualification Procedure 52 Page 2

Concrete Blocks

The manufacture shall provide concrete slabs with the following requirements:

- 1. Must have a minimum compressive strength of 4,000 psi. This shall be verified by at least four 6" x 12" concrete Cylinders per mix.
- 2. Must be located locally with access to electricity and air compressor.
- 3. Must have adequate surface area and depth to perform the pull-out tests.
- 4. Cost and disposal of the concrete slabs will be borne by the manufacturer.

Special Tools

The manufacturer will provide the special tools needed for the evaluation.

TEST REQUIREMENTS:

<u>Laboratory Testing</u>

The manufacturer's representative shall be present during the installation for the pull out tests to ensure proper installation and handling of the material. Special adaptors or other tools which may be required for the installation shall be supplied to the Materials Section at the time of testing.

A loading frame will be placed directly over the installed rebar so that a tensile pullout load can be applied to the bar with a hydraulic jack. The ultimate load carried by each rebar will be reported as well as the mode of failure. The mode of failure may occur by one or a combination of the following:

- 1. Failure of the concrete test slab.
- 2. Bond failure between the rebar and test slab.
- 3. The yielding or fracture of the rebar.

Materials and Testing Section Qualification Procedure 52 Page 3

Pull out tests will be conducted on each system for conformance to the following. Failure of the test slab or steel bar below the minimum pull out resistance will result in a retest.

<u>Bar Size</u>	Embedment, mm (in.)	Min. Pull out, kg (lbs.)
No. 13 (No. 4)	305 (12)	2,450 (5,400)

The adhesive anchor system will be tested for compressive strength in accordance with DOTD TR 705 for non-cementitious material or AASHTO T106 for cementitious materials. A minimum compressive strength of 34.48 MPa (5000 PSI) in 24 hours will be required.

Evaluation Time

Laboratory testing - one month

GENERAL:

Upon completion of the evaluation, the submitter will be notified in writing concerning the results of the evaluation and whether the product will or will not be added to the Qualified Products List. The Department reserves the right to reevaluate any approved product at any time.

PROJECT ACCEPTANCE REQUIREMENTS:

Sampling of qualified products for project acceptance will not be required provided the material is properly identified as being the specific product on the Qualified Products List. The Department, however, reserves the right to sample any material should it be questionable.

Materials and Testing Section Qualification Procedure 52 Page 4

DISQUALIFICATION:

Any product may be removed from the Qualified Products List should any problem develop concerning the formulation, application or performance. The Department must be notified in writing of any change in product formulation. Significant changes may require reevaluation of the product.

REQUALIFICATION:

A product which has been disqualified and removed from the Qualified Products List will be considered for reevaluation only after submission of a formal written request along with acceptable evidence that the problems causing the disqualification have been solved.
